

Giorgi Dzidziguri •

Web designer and AI automation builder

Budapest, Hungary · remote · gio@dzidziweb.com · +36 20 347 5768 · dzidziweb.com · linkedin.com/in/giorgi-dzidziguri-0308ba248

I design websites and build the AI systems that run my one person studio. Since August 2026 I have launched two live sites, a working outreach engine, a research pipeline and a shared memory that AI agents read and update every day. I don't write code by hand yet. I plan the work, direct AI coding tools, judge every result on desktop and phone, and ship. Film school gave me an eye for story and motion. I'm looking for remote work.

EXPERIENCE

Founder and web designer, dzidzi

Budapest, clients in the US · August 2026 to now

- Designed and launched my studio site dzidziweb.com (live since October 2026): seven chapters, a custom animated signature, an accessibility page, video in three formats.
- Delivered jenbatallas.com for a realtor in Austin, Texas: a paid project with a content editor she uses herself. She gave a written testimonial and recommends me.
- Set the offer and published fixed prices from \$1,000, with a written statement of work before any deposit.
- Built a full client kit: statement of work, care agreement, handover and editing guides, all checked against the live prices by a script.
- Run cold outreach to small businesses through my own engine: every email is checked against the prospect's live site and carries a concept picture of their homepage.

SYSTEMS I BUILT AND RUN

Directed and tested by me, written by AI coding tools (Claude Code and Codex) under my plans.

- **Lead Finder**, an outreach engine. Finds small businesses with broken websites from open map and licence data, checks each site in a real browser on desktop and phone, verifies the finding, and leaves a personal email as a Gmail draft with a concept picture. 12 niche profiles, 564 automatic tests, about \$0.10 of AI cost per lead.
- **Research Engine**, a self checking research brief. Reads up to 600 pages a run from 42 sources, grades them, verifies every claim against the source, and writes one short brief. 213 tests, about \$1 a run.
- **The vault**, a shared memory in Obsidian that every AI session reads and updates. Rules, one home for each fact, nine jobs that start from a plain sentence ("find me 5 leads"), safety walls with 71 tests so agents must ask before sending, pushing or deleting, and a weekday inbox check that drafts replies for me to send.
- **Design library**, 167 approved interaction and layout patterns from sites I admire, with measured motion and my 18 design principles, used to compose new sites and the homepage templates in my outreach.

EDUCATION

- BA in Film and Media, Budapest Metropolitan University, 2023 to 2026. Directing, editing, cinematography, sound, production management.
- Photoshop course certificate, Academy of Digital Industries, Tbilisi, 2021.

TOOLS

- **Design:** Photoshop, Illustrator, Lightroom, Canva, Midjourney; a personal library of design patterns.
- **AI and automation:** Claude Code, Codex, subagents, MCP, hooks, scheduled jobs, model and cost routing, Obsidian as shared memory.
- **Web:** Astro, Cloudflare (hosting, DNS, mail records), Google Workspace, Playwright site checks. All built through AI tools under my direction.
- **Also:** Premiere Pro, Keynote, PowerPoint, Google Docs and Sheets, macOS.
- **Learning now:** HTML and CSS basics, Figma.
